

ARTIFICIAL INTELLIGENCE FOR BUSINESS, MBA

The Artificial Intelligence for Business MBA major is part of the key strategic initiative on AI and Analytics (WAIAI) and is in direct response to growing student interest in AI courses and AI tools and platforms (e.g., extracurricular activities like the recent “hack-AI-thon” are often oversubscribed). In addition, we expect student demand to keep growing as companies everywhere continue to invest in AI and Wharton continues to expand its AI-related content offerings.

The Artificial Intelligence for Business major is designed to address two broad topics: (1) the (more) technical understanding of methods and how they are being applied by firms to solve business problems and (2) the (more) conceptual understanding of how the technology impacts firms and society, including economic, social, and ethical issues that AI deployment introduces.

Reflecting this conceptualization, the major has two pillars, F&I:

- Foundational Methods (or F)
- Impact and Ethics (or I)

Courses from Pillar F cover foundational skills needed to understand, work with, and/or evaluate AI systems. Such courses can cover, but are not limited to, subjects such as data engineering, data science, statistics, machine learning, or neuroscience.

Courses from Pillar I cover the business, economic, legal, ethical, psychological, or societal impact of AI.

Curriculum

The major in Artificial Intelligence for Business requires a total of 4 CU.

- Courses taken on a pass/fail basis cannot be counted toward the major.
- A maximum of 1 CU of an Independent Study Project (ISP) can count toward the major with faculty advisor approval.
- A maximum of 1 CU of courses outside of Wharton may be considered with faculty advisor approval
